

Feeding Tube Awareness Week

2-8 February

#FTAW2025

Tube feeding, also known as enteral nutrition, is a way of providing nourishment to the body when a person is unable to eat or drink, or cannot eat or drink enough. There are different types of feeding tubes that deliver nutrition directly into the stomach or small intestine.

Landmarks, buildings and bridges across Australia and New Zealand are illuminating purple and blue to shine the light on tube feeding. You can help raise awareness by taking a photo at your nearest #FTAWLightUp location during Feeding Tube Awareness Week and sharing it on social media.

ausEE Inc.

a charity dedicated to improving lives affected by an eosinophilic disease
